Practical

FUNDAMENTALS OF OPC (OLE FOR PROCESS CONTROL)

AFTER THIS WORKSHOP YOU WILL BE ABLE TO:

- Describe what OPC is and how to apply it to your applications
- Demonstrate how an OPC Server is designed
- Demonstrate how an OPC Client is designed
- Understand OPC Data Access 2.0
- Describe the key components of OPC
- Describe the key features of OPC
- Configure a simple application to display data from the plant floor
- Build a complete SCADA System and supporting components using OPC
- Enhance your existing legacy control system networks to use OPC
- Understand why OPC is such a robust solution
- Know why you need to demand OPC in your products
- Migrate your process data seamlessly into your office Word/Excel/Access Applications

WHO SHOULD ATTEND:

If you are using any form of automation or communication system or are applying PCs/PLCs/SCADA systems, then this workshop will give you the essential tools in working with OPC. It is not an advanced workshop - but a hands-on one.

Typical People who would benefit are:

- Process Control and Instrumentation
- Engineers and Technicians
- Design Engineers
- Network Engineers
- Electrical Engineers
- Engineering Managers
- Network System Administrators
OPC, or OLE for Process Control, has come a long way in making the engineer’s dream of plug-and-play compatibility in automation engineering achievable. OPC is an industry wide standard that breaks this proprietary lock by allowing open connectivity based on the principles adapted from widely accepted and applied ‘Microsoft Windows’ integration standards. OPC capabilities have been demonstrated in many practical applications and it is now a very well established approach for different competing manufacturers. It is now also considered the standard interface in the Windows environment. If you are serious about reducing your costs of installing and maintaining your automation systems you need to use OPC.

If you have only briefly heard about OPC and want to get to grips with its tremendous power and apply this to your plant and application, then this workshop will give you the necessary tools. You will receive a valuable overview of OLE for Process Control (OPC) and understand why it is the standard of choice for data access in automation systems. You will be exposed to and understand the essential components of OPC based on typical applications. You will understand how OPC Servers are installed and how they are then accessed by OPC clients (which could be SCADA systems). The exercises that you will work through will allow you to apply the theory you gain in the class in a practical manner.

The OPC Specification will then be discussed in great detail and you will be exposed to the development of OPC Servers and Clients. The interaction between OPC and DCOM will be discussed in practical detail.

The latest trends and future developments with OPC in the USA and Europe will be detailed.

PRE-REQUISITES:
A good knowledge of the Windows environment is helpful. You should have been working in the Automation, Process Control, SCADA and/or PLC environment to appreciate the need and power of the OPC standard.

PRACTICAL SESSIONS
- Connect up different packages using OPC
- Troubleshooting problems

“Most practical and user friendly course, will use information in daily work life.”

J. Guthrie

ON-SITE TRAINING
✓ SAVE over 50% by having an IDC workshop presented at your premises.
✓ Customise the training to YOUR workplace.
✓ Have the training delivered when and where you need it.
