
PRACTICAL ELECTRICAL WIRING STANDARDS: NATIONAL RULES FOR ELECTRICAL INSTALLATIONS - ET 101:2008 (INCLUDING AMENDMENTS 1 AND 2)

YOU WILL LEARN:

- The essentials of the ET 101 Standard
- How to find your way around ET 101
- Harmonisation issues with European standards
- Principles and practice of shock protection
- Calculation of circuit impedances
- Discrimination between devices
- Cable sizing
- Earthing and bonding
- Inspection and testing requirements
- Certification requirements

WHO SHOULD ATTEND:

- Building services engineers
- Electrical apprentices
- Electrical design staff
- Electrical engineers
- Electrical trades persons
- Engineering managers
- Graduate electrical engineer trainees
- Maintenance and shutdown planning staff
- Maintenance managers
- Private electrical contractors

Technology Training that Works

The Workshop

Internationally there has been steady progress towards the harmonisation of electrical wiring standards. European standards are based on the international IEC 364 under the umbrella of Harmonisation Document HD 384. The format of these is reflected in the ETCI national rules ET 101: 2008 and the UK IEE wiring regulations BS 7671:2008.

This workshop is designed to provide up to date information and training on the current edition of National Rules ET 101: 2008. It will consist of in-depth teaching on all aspects of the national rules and their application with many practical examples and sample design calculations. The workshop includes references to safety, maintenance, inspection and testing. In addition, it provides a summary of some of the basic principles necessary for a good understanding of electrical installation technology.

Pre-requisites

You will need a fundamental understanding of electrical systems. We will provide this material to you if you feel you would like some further pre-course reading.

Please bring a calculator (or computer) and pen along to the course to assist with the calculations.

Practical Sessions

This is a practical, hands on workshop enabling you to work through practical exercises which reinforce the concepts discussed. There will be at least 8 exercises to illustrate some of the calculations that are required during installation design, to reinforce the knowledge gained on the course.

To gain full value from this workshop, please bring your calculator and if possible your laptop/notebook computer.

The Program

INTRODUCTION TO IRISH NATIONAL RULES

- Structure of international and Irish national rules
- Foundation electrical principles - terminology and definitions
- Scope of national rules
- Growth of electrical distribution systems and polyphase circuits
- Types of earthing systems
- Requirements for safety and planning of electrical installations
- Definitions

EARTHING ARRANGEMENTS

- Need for earthing in electrical systems
- Supply system earthing
- Protective earthing of consumer installations
- TN-C-S systems
- Earth faults
- Earth electrodes
- Equipotential bonding

PLANNING OF ELECTRICAL INSTALLATIONS

- Purpose, supplies and structure
- External influences
- Compatibility and maintainability
- Safety services
- Continuity of service
- Voltage band

ELECTRICAL HAZARDS AND PROTECTION

- Electrical hazards
- Codes for degree of protection by enclosures
- Principles of basic and fault shock protection
- Calculation of disconnection times
- Thermal effects
- Protection against voltage disturbances
- Isolation and switching

SELECTION AND ERECTION OF EQUIPMENT

- Common rules and wiring systems
- Isolation, switching, control and monitoring
- Earthing arrangement and protective conductors
- Luminaries and lighting installations
- Safety services

INSPECTION AND TESTING

- Initial verification
- Testing
- Periodic inspection and reporting
- Certification and reporting

SPECIAL INSTALLATIONS OR LOCATIONS

- Locations of increased shock risk such as bath or shower, swimming pools, hot air saunas
- Construction installations, agricultural and horticultural premises
- Installations in restrictive conductive locations
- Caravans and marinas
- Medical locations
- Exhibitions
- Solar photovoltaic power supply systems
- Outdoor lighting, mobile units, temporary installations such as fairgrounds and amusement parks
- Floor and ceiling systems
- Maintenance gangways

MAINTENANCE CONSIDERATIONS

SAMPLE DESIGN CALCULATIONS

SUMMARY, OPEN FORUM AND CLOSING

“

Enlightening - dealing with daily problems which we find unexplainable.

On-Site Training

- ✓ SAVE over 50% by having an IDC workshop presented at your premises.
- ✓ Customise the training to YOUR workplace.
- ✓ Have the training delivered when and where you need it.

Contact us for a FREE proposal.
